

ALL-CARRIER ADAPTABLE

Stemming from **the new generation** of Combat Firing Simulators, the B2M CFS is a tailored system that offers powerful and sophisticated functionalities dedicated to technical firing instruction and tactical training. Used on a regular basis at combat training centres (CENZUB, CENTAC, etc.), this simulator allows Armed forces to improve their skills faster and train more effectively. This system includes a shooting function and a target function.

PERFORMANCES

- Shooting function adaptable to all-calibre: from sniper rifle (12.7 mm) to tank calibre (105 mm)
- Mountable/dismountable devices, without altering the original weapon system
- Adjustable to all types of carriers, French or foreign: Infantry Fighting Vehicles, Armoured Personnel Carrier, tanks, etc
- Day and night use
- Multiple ground effects available (smoke, noise, etc.)
- Generic target function

MISSION

Allow Armed Forces to train with real weapon systems and guaranteed safety, without ammunition. Enable faster development of shooting skills and tactical training.

TECHNOLOGY

Shot precision of the real weapon system is reproduced by the 2-way laser technology (Harmless - class 1 laser safety).

B2M IT

- The B2M IT is an additional device designed to enable training in open field or shooting range with any weapon system equipped with B2M CFS:
- Simultaneous training of up to 4 shooters on different or identical weapon systems, under the supervision of one instructor
 - Works on fixed or moving targets. Separate programmable target category for each shooter
 - Exercise monitoring on dedicated software
 - Recorded exercise to monitor progress

BVCT

The BVCT is a dedicated software for sniper rifle (PGM's FR12.7) or 12.7 mm machine gun-mounted equipped with B2M CFS. This software allows the analysis and monitoring of shooting training as well as the customization of environmental settings (temperature, wind, altitude, etc.).

INFOS

Adaptable to all calibres, reduces training costs and enhances training safety! (No ammunition use)

GDI'S ASSET

GDI Simulation provides you with a team of experts offering you multi-services solutions. MRO assistance (maintenance, repair, and overhaul) is specifically conceived to assist you on-site before, during and after Armed Forces exercises.

SUPPORT INCLUDES:

- À la carte instruction
- Assistance throughout training sessions
- Support to garrison training exercises
- User technical assistance
- Preventive and curative maintenance of our simulators
