

MMP CFS

ERGONOMIC

Stemming from **the new generation** of Combat Firing Simulators the MMP CFS was developed in partnership with MBDA to fit the new MMP (Medium Range Missile). This simulator meets the tactical training needs of Armed Forces on the ground when exercising on instrumented targets. The MMP CFS offers adapted instruction solutions. This tool was designed to integrate all specificities from the original weapon system to faster familiarization with shooting and combat techniques. The MMP CFS succeeds to the Milan and Eryx CFS.

PERFORMANCES

- Replicates all functions from the new MMP missile, including those associated with the missile's homing device (fire-and-forget, flight re-guiding, beyond-visual-range shooting)
- Dual laser and digital technology enabling beyond the line of sight shooting

MISSION

The MMP CFS seeks to perfect the tactical preparation and training of Armed Forces in the use of the new MMP missile.

The MMP GTS and MMP CFS are complementary.

TECHNOLOGY

The MMP CFS uses a dual laser and digital technology.

INFOS

Replicates all functions from the new MMP missile with a similar interface! It fits effectively the training expectations from Armed Forces.

GDI'S ASSET

GDI Simulation provides you with a team of experts offering you multi-services solutions. MRO assistance (maintenance, repair, and overhaul) is specifically conceived to assist you on-site before, during and after Armed Forces exercises.

SUPPORT INCLUDES:

- À la carte instruction
- Assistance throughout training sessions
- Support to garrison training exercises
- User technical assistance
- Preventive and curative maintenance of our simulators
